

# An enterprise-grade deployment orchestration solution

**DeployNow** is the easiest and most secure way to run the popular open source Argo CD deployment tool along with ArgoEvents, ArgoWorkflow and Open Policy Agent

## WHY DEPLOYNOW

Managing complex deployment at scale is difficult. It takes a large team to manage the tools, monitor and deploy releases. With DeployNow, the deployment orchestration with ArgoCD, ArgoEvents, ArgoWorkflow and quality gates based on Open Policy Agent is available at the click of a button.

Choose to run DeployNow as Private SaaS in your own cloud or in any public cloud or region. Managed ArgoCD by OpsVerse will get you up and running within minutes.

argo

**Easiest and most advanced way to adopt GitOps for Kubernetes with modern roll out strategies. Utilize ArgoEvents and ArgoWorkflows for greater control and granularity over complex deployments**

## MODERN DEPLOYMENT

Managed ArgoCD supports advanced deployment strategies like blue-green and canary deployments out-of-the-box

## QUALITY GATES AND WORKFLOWS

Introduce quality gates, and manual and policy-based workflows with Open Policy Agents and Argo Workflows. DeployNow includes highly customizable policies and workflows out of the box to give you a head start

## INTELLIGENT ROLLOUT

Intelligent rollout support ensures progressive and automated deployment

## MULTIPLE DEPLOYMENT TARGETS

Deploy to multiple deployment targets (EKS, ECS, VMs, Serverless etc) with single set of tools

Fully managed ArgoCD in any cloud, region or as Private SaaS

GitOps for Kubernetes in minutes with fully managed ArgoCD

Blue-green deployments, canary deployments

RBAC and SSO support

## PRIVATE SaaS

With Private SaaS, you can rest assured that your valuable data remains within your secure infrastructure, maintaining the highest level of compliance

## ANY CLOUD, ANY REGION

Choose to run OpsVerse tools in our cloud with absolutely no resources required from you. Moreover choose from any public cloud in any region to meet your requirements

## READY IN 5 MINUTES

OpsVerse's control plane enables deployment of enterprise grade tools within 5 minutes to any cloud of your choice

## ENTERPRISE SUPPORT

Receive enterprise grade support with OpsVerse from DevOps experts at OpsVerse

## REDUCE TCO

Run your DevOps tools with significantly low TCO. Optimize data with data compression and data filtering. Run with no dedicated resources

## SIMPLE PRICING

Simple and predictable pricing that includes all the features the product has to offer. No surprises when you grow. Get maximum value for every dollar spent

## OPEN CORE

Enables engineers to quickly adapt with a minimal learning curve by utilizing familiar tools and query languages, while safeguarding your investment against future vendor lock-ins

## Private SaaS by OPSVERSE<sup>®</sup>

### Goodness of SaaS within your private cloud

Private SaaS by OpsVerse is a variation of SaaS where the provider runs the software within the customer's network but takes the responsibility for managing and securing it. The provider's Private-SaaS framework takes care of reliability, availability, upgrades and Day 2 operations. The private SaaS mode splits the control plane and the data plane, allowing customer data to remain within their network.
