

Planet's first AI DevOps Engineer

Overview

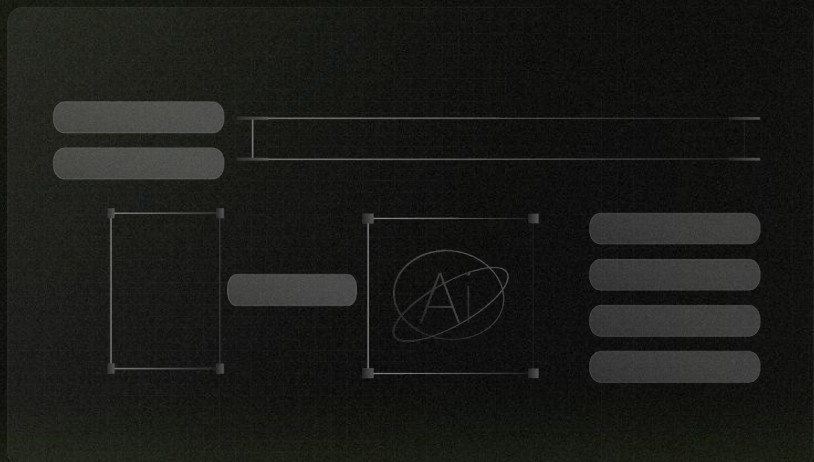

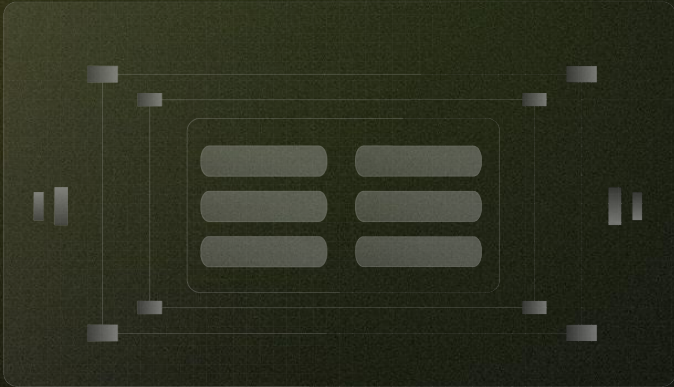

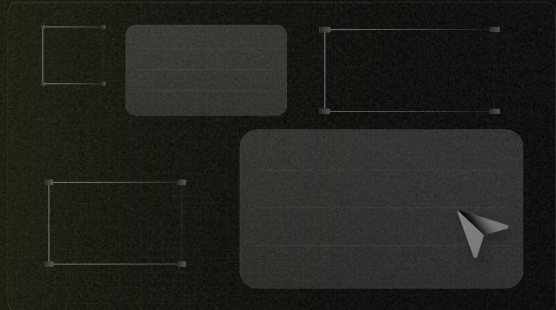

It's time to demystify your DevOps processes, work smarter, and empower your team to focus on innovation — not operations.

With OpsVerse Aiden, your organization gains a powerful AI copilot that provides answers, takes actions, and learns from your workflows. Whether it's scaling infrastructure or handling production incidents, Aiden ensures your DevOps runs smoothly, allowing your team to focus on building, not firefighting.

Key Features

Answers and Insights When You Need Them

Tired of spending countless hours navigating complex DevOps tools? With OpsVerse Aiden, you can ask any question about your infrastructure, production incidents, or deployments. Aiden delivers context-aware answers and actionable insights, providing the clarity you need, when you need it.

Virtual, Tireless, Constantly Improving

OpsVerse Aiden doesn't just provide recommendations; it takes action. From scaling infrastructure to fixing deployment issues, Aiden operates in real-time, like a tireless team member who works around the clock, ensuring continuous operational excellence.

Agentic AI + DevOps = NoOps

Aiden continuously learns from your team's behavior and adapts to your workflows, improving over time. You can even train Aiden for specific tasks that are unique to your organization, making it a true AI-powered sidekick that evolves alongside your DevOps practices.

Privacy-First Design

You have control over where Aiden is deployed and which large language models (LLMs) are used. This ensures that your organization's data privacy and security standards are maintained, giving you the flexibility to remain compliant while still leveraging cutting-edge AI.

Domain-Specific LLM for DevOps

Aiden isn't just another GenAI based copilot; it leverages a custom-built, DevOps-specific model fine-tuned on proprietary datasets from industry experts along with other established LLMs. This provides precise insights, tailored workflows, and best practices that are specific to DevOps, unlike more generic models.

Who Is OpsVerse Aiden For?

OpsVerse Aiden is ideal for DevOps engineers, platform teams, SREs, and developers in organizations of 50-500 employees, building SaaS applications or software products using modern technology. Whether you're a small startup or a growing enterprise, Aiden is designed to scale with your needs and transform your operations.

Benefits

Reduce Operational Burden:

Automate routine tasks, freeing up valuable time for your team to focus on innovation.

Optimize Infrastructure:

Gain actionable insights and real-time actions that help you streamline and optimize your infrastructure management.

Tailored to Your Needs:

Aiden adapts to your organization's workflows and can be trained for hyper-specific tasks, making it a truly personalized copilot for your team.

Stay Secure and Compliant:

With a privacy-first design, Aiden ensures you maintain control over data and comply with internal policies.

The hype is real

Equip your team with the agentic copilot they need to take your DevOps operations to the next level.
